Prototype	O ₁₆ V ₁₃
AFLOW prototype label	A16B13_tI116_141_2hi_a2fh-001
ICSD	77708
CCDC	1638096
Pearson symbol	tI116
Space group number	141
Space group symbol	I4 ₁ /amd
AFLOW prototype command	<pre>aflow --proto=A16B13_tI116_141_2hi_a2fh-001 --params=a, c/a, x₂, x₃, y₄, z₄, y₅, z₅, y₆, z₆, x₇, y₇, z₇</pre>

- There are several problems with this structure:
- It is not clear if (Andersson, 1970) put this in the first (4a site at the origin) or second (inversion site at the origin) setting of space group $I4_1/amd$ #141.
- Furthermore, they give values for x and z for the (16h) positions, even though the standard definition is (0 y z) in both settings.
- The ICSD entry assumes the first setting, and that the authors meant “y” rather than “x” for the first coordinate, but kept x as “x” for the other Wyckoff positions.
- We follow this convention, using AFLOW to convert that structure to the standard second setting. The result is shown here.
- However, (Andersson, 1970) call this structure a distorted rock salt (B1) structure with vacancies on the vanadium sites and interstitial vanadium atoms on the (4a) sites, and our structure look nothing like this.
- Furthermore, the (presumably relaxed) structure found on the Materials Project page (Jain, 2013) has the same symmetry and occupied Wyckoff positions, but is actually much different than this structure.
- We will investigate this further. If updates are necessary we will revise this page.

Body-centered Tetragonal primitive vectors

$$\begin{aligned}
 \mathbf{a}_1 &= -\frac{1}{2}a \hat{\mathbf{x}} + \frac{1}{2}a \hat{\mathbf{y}} + \frac{1}{2}c \hat{\mathbf{z}} \\
 \mathbf{a}_2 &= \frac{1}{2}a \hat{\mathbf{x}} - \frac{1}{2}a \hat{\mathbf{y}} + \frac{1}{2}c \hat{\mathbf{z}} \\
 \mathbf{a}_3 &= \frac{1}{2}a \hat{\mathbf{x}} + \frac{1}{2}a \hat{\mathbf{y}} - \frac{1}{2}c \hat{\mathbf{z}}
 \end{aligned}$$
